To Whom It Might Concern

Re: Low Temperature Application of Anchor Paint Manufacturing Acrylic Structural Concrete Coatings

This letter defines the conditions of use of Anchor Paint's Acrylic Structural Concrete Coatings when applied at Low Temperatures.

Application Recommended Conditions:

- The application temperature should be between 35°F (Low) and 110°F (Max) (Air, Surface, and Material).
- The optimal ambient application temperature requires dry conditions at temperatures of 35°F or greater with zero chance of precipitation in the next 4 hours after application.
- The application should be stopped if the temperature is expected to fall below 35°F within 4 hours after application; as temperatures below 35°F retard the correct coating consolidation.
- The relative humidity should not exceed 85% and the temperature should be at least 5°F above the dew point during the 4 hour dry-time period.

I hope this clarifies the use and application of our product in the field. If there are any further questions please do not hesitate to call me.
